Introduction to Artificial Intelligence

September 28th, 2021

Announcements / Reminders

- **Midterm: October 14th!**
 - Online (NOT Beacon) section: please make arrangements.
Contact Mr. Charles Scott (scott@iit.edu) if in doubt
- **Programming Assignment #01:**
 - due: October 17th, 11:00 PM CST
- **Contribute to the discussion on Blackboard**
- **Please follow the Week 05 To Do List instructions**
- **Fall Semester midterm course evaluation reminder**
- **Grading TA assignment:**
https://docs.google.com/spreadsheets/d/1Cav_GBTGC7fLGzxuBCAUmEuJYPeF-HMLCYvwPbq8Fus/edit?usp=sharing

Programming Assignment #01

- You CAN use textbook GitHub code:
 - <https://github.com/aimacode/aima-python>
 - make sure you REFERENCE/CITE it in your comment AND report document
- Use the Blackboard Discussion to ask for tips:
 - Please don't post significant portions of code there in response.
 - Tips and hints only

Plan for Today

- **Searching: clarification**
- **Propositional logic**

CLARIFICATION: Arc (Edge) Consistency

- Values that clash can be removed from variable domains to reduce the problem:

- BEFORE** (clashing value(s) removal) domains:

- $D_A = \{0, 1, 3\}$

- $D_B = \{3, 4\}$

Constraint graph is **NOT arc-consistent**
because of value 3 clashing in both domains

- AFTER** (clashing value(s) removal) domains:

- $D_A = \{0, 1, 3\}$

- $D_B = \{4\}$ or

- $D_A = \{0, 1\}$

- $D_B = \{3, 4\}$ (depends on: which variable we start with)

Constraint graph is **arc-consistent**

Knowledge-based Agents

- Central component: Knowledge Base (KB)
- Knowledge Base is a set of sentences
- All Sentences are expressed in knowledge representation language
- Sentences can be:
 - given (axioms)
 - derived
 - used for inference
- KB can have background knowledge

Propositional Logic and KB-Agents

**Propositional
Logic:
Syntax**

**Propositional
Logic:
Semantics**

**Propositional
Logic:
Inference and
Proof Systems**

**KB-Agents:
Inference
algorithms**

Propositional Logic

Propositional logic, also known as **sentential logic** and **statement logic**, is the branch of logic that studies ways of joining and/or modifying entire propositions, statements or sentences to form more complicated propositions, statements or sentences, as well as the logical relationships and properties that are derived from these methods of combining or altering statements.

Language: Syntax and Semantics

- **Syntax:**

- defines a set of rules for producing legal (well formed) sentences in a given language

- **Semantics:**

- defines the “meaning” of a sentence → it has semantic value
- NOT all legal sentences will have semantic value:

Example: Colorless green ideas sleep furiously

Proposition / Sentence

A proposition / **sentence** (also called a logical expression) is an assertion about the world in a mathematically defined knowledge representation language. It can be true or false.

Examples:

John is sick

When it thunders, there is also lightning

Propositional Logic: Syntax

- Logical constants: **true**, **false**
- Propositional symbols / variables:
 - atomic sentences: p, q, r
 - compound / complex sentences: P, Q, R
- Wrapping parentheses: $(...)$
- Sentences are combined by logical connectives:
 $\neg \wedge \vee \Leftrightarrow \Rightarrow$
- Literals:
 - atomic sentence p or negated atomic sequence $\neg p$

Symbols: Refresher

Symbol	Name	Alternative symbols*	Should be read
\neg	Negation	$\sim, !$	not
\wedge	(Logical) conjunction	$\bullet, \&$	and
\vee	(Logical) disjunction	$+, $	or
\Rightarrow	(Material) implication	\rightarrow, \supset	implies
\Leftrightarrow	(Material) equivalence	$\leftrightarrow, \equiv, \text{iff}$	if and only if
\top	Tautology	$T, 1, \blacksquare$	truth
\perp	Contradiction	$F, 0, \square$	falsum empty clause
\therefore	Therefore		therefore

* you can encounter it elsewhere in literature

Creating Complex Sentences

atomic sentences

p _ q

↑
logical connective

complex sentences

R _ S

↑
logical connective

p, q, R, S - proposition (sentence) symbols / variables | _ logical connective: $\neg \wedge \vee \Leftrightarrow \Rightarrow$

Logical Connectives: \neg \wedge \vee \Leftrightarrow \Rightarrow

Negation (not)

literal (atomic sequence)

Logical conjunction (and)

conjuncts

Logical disjunction (or)

disjuncts

Material implication and equivalence

premise* conclusion**

* also called antecedent | ** also called consequent

Operator Precedence

Operator Precedence

Higher precedence

$()$

\neg

\wedge

\vee

\Rightarrow \Leftrightarrow

Lower precedence

Precedence in Sentences

If in doubt: left can be rewritten as right

$$\neg p \wedge q \quad ((\neg p) \wedge q)$$

$$p \wedge \neg q \quad (p \wedge (\neg q))$$

$$p \wedge q \vee r \quad ((p \wedge q) \vee r)$$

$$p \vee q \wedge r \quad (p \vee (q \wedge r))$$

$$p \Rightarrow q \Rightarrow r \quad (p \Rightarrow (q \Rightarrow r))$$

$$p \Rightarrow q \Leftrightarrow r \quad (p \Rightarrow (q \Leftrightarrow r))$$

Well-formed Sentences

A well-formed sentence is a finite sequence of symbols from a given alphabet that is part of a formal language (grammatically correct)

- **well-formed propositional logic sentence:**

$$(((p \Rightarrow q) \wedge (r \Rightarrow s)) \vee (\neg q \wedge \neg s))$$

- **NOT well-formed propositional logic sentence:**

$$((p \Rightarrow q) \Rightarrow (qq))p))$$

BNF (Backus-Naur Form) Grammar

$$\begin{aligned} \textit{Sentence} &\rightarrow \textit{AtomicSentence} \mid \textit{ComplexSentence} \\ \textit{AtomicSentence} &\rightarrow \textit{True} \mid \textit{False} \mid P \mid Q \mid R \mid \dots \quad * \\ \textit{ComplexSentence} &\rightarrow (\textit{Sentence}) \\ &\mid \neg \textit{Sentence} \\ &\mid \textit{Sentence} \wedge \textit{Sentence} \\ &\mid \textit{Sentence} \vee \textit{Sentence} \\ &\mid \textit{Sentence} \Rightarrow \textit{Sentence} \\ &\mid \textit{Sentence} \Leftrightarrow \textit{Sentence} \end{aligned}$$

OPERATOR PRECEDENCE : $\neg, \wedge, \vee, \Rightarrow, \Leftrightarrow$

* I will:

- be using true and false instead of True and False
- use lowercase p, q for atomic and uppercase P, Q for complex

English → Propositional Logic

Consider three atomic sentences in propositional logic: cool, funny, and popular. Each can be assigned a truth value of true or false.

Natural language encoded using propositional logic examples:

IF a person is cool OR funny, THEN she is popular.

$$(\text{cool} \vee \text{funny}) \Rightarrow \text{popular}$$

A person is popular ONLY IF she is EITHER cool OR funny.

$$\text{popular} \Rightarrow (\text{cool} \vee \text{funny})$$

A person is popular IF AND ONLY IF she is EITHER cool OR funny.

$$\text{popular} \Leftrightarrow (\text{cool} \vee \text{funny})$$

There is NO one who is both cool AND funny.

$$\neg(\text{cool} \wedge \text{funny})$$

Propositional Logic: Laws/Theorems

Equivalence	Law / Theorems
$p \vee q \Leftrightarrow q \vee p$ $p \wedge q \Leftrightarrow q \wedge p$	Commutative laws
$(p \vee q) \vee r \Leftrightarrow p \vee (q \vee r)$ $(p \wedge q) \wedge r \Leftrightarrow p \wedge (q \wedge r)$	Associative laws
$p \wedge (q \vee r) \Leftrightarrow (p \wedge q) \vee (p \wedge r)$ $p \vee (q \wedge r) \Leftrightarrow (p \vee q) \wedge (p \vee r)$	Distributive laws
$\neg (p \wedge q) \Leftrightarrow \neg p \vee \neg q$ $\neg (p \vee q) \Leftrightarrow \neg p \wedge \neg q$	De Morgan's laws
$p \wedge (p \vee q) \Leftrightarrow p$ $p \vee (p \wedge q) \Leftrightarrow p$	Absorption laws
$\neg (\neg p) \Leftrightarrow p$	Double Negation law (involution)
$p \wedge p \Leftrightarrow p$ $p \vee p \Leftrightarrow p$	Idempotent laws
$p \vee \neg p \Leftrightarrow \top$	Law of Excluded Middle (Negation law)
$p \wedge \neg p \Leftrightarrow \perp$	Contradiction (Negation law)
$p \wedge \top \Leftrightarrow p$ $p \vee \perp \Leftrightarrow p$	Identity laws
$p \wedge \perp \Leftrightarrow \perp$ $p \vee \top \Leftrightarrow \top$	Domination laws
$\neg p \vee q \Leftrightarrow p \Rightarrow q$	Implication law
$p \Rightarrow q \Leftrightarrow \neg q \Rightarrow \neg p$	Contraposition law
$(p \wedge q) \vee (\neg q \wedge \neg p) \Leftrightarrow (p \Leftrightarrow q)$ $(p \Rightarrow q) \wedge (q \Rightarrow p) \Leftrightarrow (p \Leftrightarrow q)$	Equivalence law

Deduction

Laws/theorems in propositional logic can be used to prove additional theorems through a process known as **deduction**:

Prove that $((\neg m \vee n) \wedge \neg n) \Rightarrow \neg m$ is a tautology:

$$((\neg m \wedge \neg n) \vee (n \wedge \neg n)) \Rightarrow \neg m$$

$$((\neg m \wedge \neg n) \vee \perp) \Rightarrow \neg m$$

$$(\neg m \wedge \neg n) \Rightarrow \neg m$$

$$\neg(\neg m \wedge \neg n) \vee \neg m$$

$$(\neg\neg m \vee \neg\neg n) \vee \neg m$$

$$(m \vee n) \vee \neg m$$

$$m \vee (n \vee \neg m)$$

$$m \vee (\neg m \vee n)$$

$$(m \vee \neg m) \vee n$$

$$T \vee n$$

$$n \vee T$$

$$T$$

by Distributive law $p \wedge (q \vee r) \Leftrightarrow (p \wedge q) \vee (p \wedge r)$

by Negation law (contradiction) $p \wedge \neg p \Leftrightarrow \perp$

by Identity law $p \vee \perp \Leftrightarrow p$

by Implication law $\neg p \vee q \Leftrightarrow p \Rightarrow q$

by De Morgan's law $\neg(p \wedge q) \Leftrightarrow \neg q \vee \neg p$

by Double Negation law $\neg(\neg p) \Leftrightarrow p$

by Associative law $(p \vee q) \vee r \Leftrightarrow p \vee (q \vee r)$

by Commutative law $p \vee q \Leftrightarrow q \vee p$

by Associative law $(p \vee q) \vee r \Leftrightarrow p \vee (q \vee r)$

by Law of Excluded Middle $p \vee \neg p \Leftrightarrow T$

by Commutative law $p \vee q \Leftrightarrow q \vee p$

by Domination Law $p \vee T \Leftrightarrow T$

Deduction

Laws/theorems in propositional logic can be used to prove additional theorems through a process known as **deduction**:

Note that we only manipulated symbols at the syntactic level!

Prove that $((\neg m \vee n) \wedge \neg n) \Rightarrow \neg m$ **is a tautology:**

$$((\neg m \wedge \neg n) \vee (n \wedge \neg n)) \Rightarrow \neg m$$

$$((\neg m \wedge \neg n) \vee \perp) \Rightarrow \neg m$$

$$(\neg m \wedge \neg n) \Rightarrow \neg m$$

$$\neg(\neg m \wedge \neg n) \vee \neg m$$

$$(\neg\neg m \vee \neg\neg n) \vee \neg m$$

$$(m \vee n) \vee \neg m$$

$$m \vee (n \vee \neg m)$$

$$m \vee (\neg m \vee n)$$

$$(m \vee \neg m) \vee n$$

$$\top \vee n$$

$$n \vee \top$$

$$\top$$

by Distributive law $p \wedge (q \vee r) \Leftrightarrow (p \wedge q) \vee (p \wedge r)$

by Negation law (contradiction) $p \wedge \neg p \Leftrightarrow \perp$

by Identity law $p \vee \perp \Leftrightarrow p$

by Implication law $\neg p \vee q \Leftrightarrow p \Rightarrow q$

by De Morgan's law $\neg(p \wedge q) \Leftrightarrow \neg p \vee \neg q$

by Double Negation law $\neg(\neg p) \Leftrightarrow p$

by Associative law $(p \vee q) \vee r \Leftrightarrow p \vee (q \vee r)$

by Commutative law $p \vee q \Leftrightarrow q \vee p$

by Associative law $(p \vee q) \vee r \Leftrightarrow p \vee (q \vee r)$

by Law of Excluded Middle $p \vee \neg p \Leftrightarrow \top$

by Commutative law $p \vee q \Leftrightarrow q \vee p$

by Domination Law $p \vee \top \Leftrightarrow \top$

Propositional Logic and KB-Agents

**Propositional
Logic:
Syntax**

**Propositional

Interpretation

The truth value assignment to propositional sentences is called an **interpretation** (an assertion about their truth **in some possible world / model**).

Definition: A mapping $I : \Sigma \rightarrow \{\text{true}, \text{false}\}$, which assigns a truth value to **every proposition variable**, is called an **interpretation**.

Sentence: $(p \vee q) \wedge (\neg q \vee r)$

Interpretation i: $p^i = \text{true}$, $q^i = \text{false}$, $r^i = \text{true}$

Truth Values and Truth Tables

Propositional logic sentences can have a **truth value** assigned to them:

- Atomic sentences:
 - either **true** or **false**
- Compound / complex sentence truth value can be established using a truth table:

p	q	$\neg p$	$p \wedge q$	$p \vee q$	$p \Rightarrow q$	$p \Leftrightarrow q$
true	true	false	true	true	true	true
true	false	false	false	true	false	false
false	true	true	false	true	true	false
false	false	true	false	false	true	true

Evaluation

Evaluation is the process of **determining the truth values of compound/complex sentences** given a truth assignment for the **truth values of proposition constants/atomic sentences**. Consider the following truth assignment i:

$p^i = \text{true}$, $q^i = \text{false}$, $r^i = \text{true}$

Assignment

Let's evaluate the following complex sentence $(p \vee q) \wedge (\neg q \vee r)$:

Evaluation

Evaluation is the process of **determining the truth values of compound/complex sentences** given a **truth assignment for the truth values of proposition constants/atomic sentences**. Consider the following truth assignment i:

$p^i = \text{true}, q^i = \text{false}, r^i = \text{true}$ Assignment

Let's evaluate the following complex sentence $(p \vee q) \wedge (\neg q \vee r)$:

$(p \vee q) \wedge (\neg q \vee r) \rightarrow (\text{true} \vee \text{false}) \wedge (\neg \text{false} \vee \text{true})$ Subsitute

Evaluation

Evaluation is the process of **determining the truth values of compound/complex sentences** given a **truth assignment for the truth values of proposition constants/atomic sentences**. Consider the following truth assignment i:

$p^i = \text{true}, q^i = \text{false}, r^i = \text{true}$ Assignment

Let's evaluate the following complex sentence $(p \vee q) \wedge (\neg q \vee r)$:

$(p \vee q) \wedge (\neg q \vee r) \rightarrow (\text{true} \vee \text{false}) \wedge (\neg \text{false} \vee \text{true})$ Subsitute

$(\text{true} \vee \text{false}) \wedge (\neg \text{false} \vee \text{true})$ Disjunction

Evaluation

Evaluation is the process of **determining the truth values of compound/complex sentences** given a **truth assignment for the truth values of proposition constants/atomic sentences**. Consider the following truth assignment i:

$p^i = \text{true}, q^i = \text{false}, r^i = \text{true}$ Assignment

Let's evaluate the following complex sentence $(p \vee q) \wedge (\neg q \vee r)$:

$(p \vee q) \wedge (\neg q \vee r) \rightarrow (\text{true} \vee \text{false}) \wedge (\neg \text{false} \vee \text{true})$ Subsitute

$(\text{true} \vee \text{false}) \wedge (\neg \text{false} \vee \text{true})$ Disjunction

$\text{true} \wedge (\neg \text{false} \vee \text{true})$ Negation

Evaluation

Evaluation is the process of **determining the truth values of compound/complex sentences** given a **truth assignment for the truth values of proposition constants/atomic sentences**. Consider the following truth assignment i:

$p^i = \text{true}, q^i = \text{false}, r^i = \text{true}$ Assignment

Let's evaluate the following complex sentence $(p \vee q) \wedge (\neg q \vee r)$:

$(p \vee q) \wedge (\neg q \vee r) \rightarrow (\text{true} \vee \text{false}) \wedge (\neg \text{false} \vee \text{true})$ Subsitute

$(\text{true} \vee \text{false}) \wedge (\neg \text{false} \vee \text{true})$ Disjunction

$\text{true} \wedge (\neg \text{false} \vee \text{true})$ Negation

$\text{true} \wedge (\text{true} \vee \text{true})$ Disjunction

Evaluation

Evaluation is the process of **determining the truth values of compound/complex sentences** given a **truth assignment for the truth values of proposition constants/atomic sentences**. Consider the following truth assignment i:

$p^i = \text{true}, q^i = \text{false}, r^i = \text{true}$ Assignment

Let's evaluate the following complex sentence $(p \vee q) \wedge (\neg q \vee r)$:

$(p \vee q) \wedge (\neg q \vee r) \rightarrow (\text{true} \vee \text{false}) \wedge (\neg \text{false} \vee \text{true})$ Subsitute

$(\text{true} \vee \text{false}) \wedge (\neg \text{false} \vee \text{true})$ Disjunction

$\text{true} \wedge (\neg \text{false} \vee \text{true})$ Negation

$\text{true} \wedge (\text{true} \vee \text{true})$ Disjunction

$\text{true} \wedge \text{true}$ Conjunction

Evaluation

Evaluation is the process of **determining the truth values of compound/complex sentences** given a **truth assignment for the truth values of proposition constants/atomic sentences**. Consider the following truth assignment i:

$p^i = \text{true}, q^i = \text{false}, r^i = \text{true}$ Assignment

Let's evaluate the following complex sentence $(p \vee q) \wedge (\neg q \vee r)$:

$(p \vee q) \wedge (\neg q \vee r) \rightarrow (\text{true} \vee \text{false}) \wedge (\neg \text{false} \vee \text{true})$ Subsitute

$(\text{true} \vee \text{false}) \wedge (\neg \text{false} \vee \text{true})$ Disjunction

$\text{true} \wedge (\neg \text{false} \vee \text{true})$ Negation

$\text{true} \wedge (\text{true} \vee \text{true})$ Disjunction

$\text{true} \wedge \text{true}$ Conjunction

true Interpretation

Complex Sentence: Truth Table

Consider a complex sentence **R** built with **N** propositional variables $p_1, p_2, p_3, \dots, p_{N-1}, p_N$ and logical connectives ($\neg, \vee, \wedge, \Rightarrow, \Leftrightarrow$). Here is a corresponding truth table for sentence **R**.

		N Propositional Variables						Complex sentence R		
		p_1	p_2	p_3	...	p_{N-1}	p_N			
2^N Truth Assignments		true	true	true	...	true	true	false	2^N Interpretations of R	
		true	true	true	...	true	false	true		
		true	true	false	...	false	true	false		
			
		false	false	true	...	true	false	true		
		false	false	true	...	false	true	true		
		false	false	false	...	false	false	false		

Complex Sentence: Truth Table

Consider a complex sentence **R** built with **N** propositional variables $p_1, p_2, p_3, \dots, p_{N-1}, p_N$ and logical connectives ($\neg, \vee, \wedge, \Rightarrow, \Leftrightarrow$). Each truth assignment is a different possible world.

N Propositional Variables						Complex sentence R
p_1	p_2	p_3	...	p_{N-1}	p_N	
true	true	true	...	true	true	false
true	true	true	...	true	false	true
true	true	false	...	false	true	false
...
false	false	true	...	true	false	true
false	false	true	...	false	true	true
false	false	false	...	false	false	false

2^N Possible Worlds (Models)

2^N Interpretations of **R**

Sentence: Syntactic / Semantic Levels

Each propositional logic “exists” on two levels:

- Syntactic: where a sentence is just a legal arrangement of language symbols. Sentence

$$(p \vee q) \wedge (\neg q \vee r)$$

WITHOUT interpretation **HAS NO MEANING**

- we can manipulate symbols, but we CANNOT reason
- Semantic: where a sentence has a truth value is assigned to it (interpretation):

$$(p \vee q) \wedge (\neg q \vee r) \text{ where } p^i = \text{true}, q^i = \text{false}, r^i = \text{true}$$

HAS MEANING (through interpretation) → it is true

Sentence: Syntactic / Semantic Levels

Each propositional logic “exists” on two levels:

- Syntactic: where a sentence is just a legal arrangement of language symbols. Sentence

$$(\text{cool} \vee \text{funny}) \Rightarrow \text{popular}$$

WITHOUT interpretation **HAS NO MEANING**

- we can't tell if a given person is popular here
- Semantic: where a sentence has a truth value is assigned to it (interpretation):

$(\text{cool} \vee \text{funny}) \Rightarrow \text{popular}$ where $\text{cool} = \text{true}$, $\text{funny} = \text{false}$
HAS MEANING → we can deduce that a person is popular

Sentence Semantical Equivalence

Two propositional logic sentences F and G are called **semantically equivalent** if they take on the **same interpretation** for all truth value assignments. If that is the case $F \equiv G$.

Example: sentence $\neg a \vee b$ is equivalent to sentence $a \Rightarrow b$. Proof with a truth table:

a	b	$\neg a$	$\neg a \vee b$	\Leftrightarrow	$a \Rightarrow b$
true	true	false	true	\equiv	true
true	false	false	false		false
false	true	true	true		true
false	false	true	true		true

Sentence Classes

SATISFIABLE

A sentence is **satisfiable** if it is **true for AT LEAST ONE interpretation.**

In plain English:
“You can find **AT LEAST one assignment** of logical values of true and false to individual propositional variables that will make this sentence **true.**”

Example:

$$p \Rightarrow q$$

p	q	$p \Rightarrow q$
true	true	true
true	false	false
false	true	true
false	false	true

(LOGICALLY) VALID/TAUTOLOGY

A sentence is (logically) **valid** if it is **true for ALL interpretations.**
Also called a **tautology.**

In plain English:
“This sentence is **ALWAYS true** regardless of value assignment to individual propositional variables.”

Example:

$$p \vee \neg p$$

p	$\neg p$	$p \vee \neg p$
true	false	true
true	false	true
false	true	true
false	true	true

UNSATISFIABLE/CONTRADICTION

A sentence is **unsatisfiable** if it is **NOT true for ANY interpretation.**
Also called a **contradiction.**

In plain English:
“This sentence is **ALWAYS false** regardless of value assignment to individual propositional variables.”

Example:

$$p \wedge \neg p$$

p	$\neg p$	$p \wedge \neg p$
true	false	false
true	false	false
false	true	false
false	true	false

Propositional Logic and KB-Agents

**Propositional
Logic:
Syntax**

**Propositional
Logic:
Semantics**

**Propositional
Logic:
Inference and
Proof Systems**

**KB-Agents:
Inference
algorithms**

Inference: The idea

The idea:

Given everything (expressed as sentences) that we know, can we infer if some query (another sentence) is true or not (satisfied or not)?

(Automated) Proof System

In AI we are interested in taking existing knowledge (sentences in KB) and from that:

- **deriving new knowledge (new sentences)**
- **answering questions (query sentences)**

In Propositional Logic this means showing that some sentence Q follows from a Knowledge Base KB

where:

- **Q - some query sentence**
- **KB - knowledge base (a sentence made of sentences)**

Inference: Real-life Example

If it is raining, I will need an umbrella. It is raining. Therefore, I will need an umbrella.

Inference: Real-life Example

If it is raining, **then** I will need an umbrella. It is raining. **Therefore**, I will need an umbrella.

Inference: Real-life Example

If it is raining, then I will need an umbrella. It is raining. Therefore, I will need an umbrella.

Propositional Logic: An Argument

An argument A in propositional logic has the following form:

A:	P1	PREMISES
	P2	
	...	
	PN	
<hr/>		
	$\therefore C$	CONCLUSION

An argument A is said to be **valid** if the implication formed by taking the conjunction of the premiseses (antecedent) and the conclusion C (consequent),

$$(P1 \wedge P2 \wedge P3 \wedge \dots \wedge PN) \Rightarrow C \text{ is a } \mathbf{tautology}.$$

Propositional Logic: An Argument

An argument A in propositional logic has the following form:

A:	P1	PREMISES
	P2	
	...	
	PN	
	<hr/>	
	$\therefore C$	CONCLUSION

Premises are taken for granted (assumed to be **true**).

Inference: Real-life Example

If it is raining, then I will need an umbrella.

It is raining.

Therefore, I will need an umbrella.

Inference: Real-life Example

If it is raining, then I will need an umbrella.

It is raining. ← PREMISES

Therefore, I will need an umbrella. ← CONCLUSION

Inference: Real-life Example

Inference: Real-life Example

p = "It is raining."

q = "I will need an umbrella."

PREMISE1 = "If it is raining, then I will need an umbrella."

PREMISE2 = "It is raining."

CONCLUSION = "I will need an umbrella."

Inference: Real-life Example

p = "It is raining."

q = "I will need an umbrella."

PREMISE1 = "If it is raining, then I will need an umbrella."

PREMISE2 = "It is raining."

CONCLUSION = "I will need an umbrella."

Inference Rules: Modus Ponens

p = "It is raining."

q = "I will need an umbrella."

PREMISE1 = $p \Rightarrow q$

PREMISE2 = p

CONCLUSION = q

Inference Rules: Modus Ponens

p = "It is raining."

Addition P <hr/> $\therefore P \vee Q$	Simplification $P \wedge Q$ <hr/> $\therefore P$	Disjunctive Syllogism $P \vee Q$ $\neg P$ <hr/> $\therefore Q$	Resolution $P \vee Q$ $\neg P \vee R$ <hr/> $\therefore Q \vee R$

Tautological forms:

Modus Ponens: $((P \Rightarrow Q) \wedge P) \Rightarrow Q$ | **Modus Tollens:** $((P \Rightarrow Q) \wedge \neg Q) \Rightarrow \neg P$

Hypothetical Syllogism: $((P \Rightarrow Q) \wedge (Q \Rightarrow R)) \Rightarrow (P \Rightarrow R)$

Disjunctive Syllogism: $((P \vee Q) \wedge \neg P) \Rightarrow Q$

Addition: $P \Rightarrow P \vee Q$ | **Simplification:** $(P \wedge Q) \Rightarrow P$

Conjunction: $(P) \wedge (Q) \Rightarrow (P \wedge Q)$ | **Resolution:** $((P \vee Q) \wedge (\neg P \vee R)) \Rightarrow (Q \vee R)$

Argument Validity: Truth Table Proof

$$p \Rightarrow q$$

$$p \Rightarrow \neg r$$

$$\neg p \Rightarrow \neg r$$

$$\therefore \neg r$$

p	q	r	P1:p \Rightarrow q	P2:q \Rightarrow \neg r	P3: \neg p \Rightarrow \neg r	P1 \wedge P2 \wedge P3	(P1 \wedge P2 \wedge P3) \Rightarrow \neg r
true	true	true	true	false	true	false	true
true	true	false	true	true	true	true	true
true	false	true	false	true	true	false	true
true	false	false	false	true	true	false	true
false	true	true	true	false	false	false	true
false	true	false	true	true	true	true	true
false	false	true	true	true	false	false	true
false	false	false	true	true	true	true	true

Argument Validity: Truth Table Proof

$$p \Rightarrow q$$

$$A \Leftrightarrow ((p \Rightarrow q) \wedge (p \Rightarrow \neg r) \wedge (\neg p \Rightarrow \neg r) \Rightarrow \neg r)$$

$$p \Rightarrow \neg r$$

An argument A is **valid** if it is a **tautology**.

$$\neg p \Rightarrow \neg r$$

$$\therefore \neg r$$

p	q	r	P1:p \Rightarrow q	P2:q \Rightarrow \neg r	P3: \neg p \Rightarrow \neg r	P1 \wedge P2 \wedge P3	(P1 \wedge P2 \wedge P3) \Rightarrow \neg r
true	true	true	true	false	true	false	true

true	false	true	false	true	true	false	true
true	false	false	false	true	true	false	true
false	true	true	true	false	false	false	true
false	true	false	true	true	true	true	true
false	false	true	true	true	false	false	true
false	false	false	true	true	true	true	true

Argument Validity: Truth Table Proof

$$p \Rightarrow q$$

$$A \Leftrightarrow ((P1) \wedge (P2) \wedge (P3) \Rightarrow \neg r)$$

$$p \Rightarrow \neg r$$

An argument A is **valid** if it is a **tautology**.

$$\neg p \Rightarrow \neg r$$

Argument A is valid, because it is a tautology

$$\therefore \neg r$$

(always true regardless of **p**, **q**, **r** truth assignments)

p	q	r	P1: $p \Rightarrow q$	P2: $q \Rightarrow \neg r$	P3: $\neg p \Rightarrow \neg r$	$P1 \wedge P2 \wedge P3$	A
true	true	true	true	false	true	false	true
true	true	false	true	true	true	true	true
true	false	true	false	true	true	false	true
true	false	false	false	true	true	false	true
false	true	true	true	false	false	false	true
false	true	false	true	true	true	true	true
false	false	true	true	true	false	false	true
false	false	false	true	true	true	true	true

Logical Entailment

A set of sentences (called **premises**) logically **entails** a sentence (called a **conclusion**) if and only if **every truth assignment that satisfies the premises also satisfies the conclusion.**

$$\text{PREMISES} \models \text{CONCLUSION}$$

Logical Entailment

Definition: A sentence KB entails a sentence Q (or Q follows from KB) if every model of KB is also a model of Q. We write:

$$KB \models Q$$

In other words:

- For every interpretation in which KB is **true**, Q is also **true**
- “Whenever KB is **true**, Q is also **true**”

Entailment: Deriving Conclusions

You can prove if:

$$KB \models Q$$

is **true** in a number of ways:

- Model checking (enumeration)
- Truth table proof (enumeration)
- Proof by resolution

You can also prove related sentences:

- prove that $KB \wedge \neg Q$ is **unsatisfiable** (by contradiction)
- prove that $KB \Rightarrow Q$ is a **tautology**

Model / “Possible World”

A **model** (a “possible world”) is a single truth assignment / interpretation.

If a sentence U is **true** in model K , K satisfies U .

$M(U)$: set of **ALL** models of U (that satisfy U)

Now:

$KB \models Q$ if and only if $M(KB) \subseteq M(Q)$

$KB \models Q$ is **true** if and only if **in EVERY model** in which KB is **true**, Q is also **true**.

Logical Entailment with Truth Table

$$p \Rightarrow q \quad \text{KB}$$

$$p \Rightarrow \neg r$$

$$\neg p \Rightarrow \neg r$$

$$\text{KB} \Leftrightarrow (p \Rightarrow q) \wedge (p \Rightarrow \neg r) \wedge (\neg p \Rightarrow \neg r)$$

$$Q \Leftrightarrow \neg r$$

$$\therefore \neg r \quad Q$$

Model	p	q	r	P1:p \Rightarrow q	P2:q \Rightarrow \neg r	P3: \neg p \Rightarrow \neg r	KB	Q
M1	true	true	true	true	false	true	false	false
M2	true	true	false	true	true	true	true	true
M3	true	false	true	false	true	true	false	false
M4	true	false	false	false	true	true	false	true
M5	false	true	true	true	false	false	false	false
M6	false	true	false	true	true	true	true	true
M7	false	false	true	true	true	false	false	false
M8	false	false	false	true	true	true	true	true

Entailment: Model Checking

$$p \Rightarrow q \quad \text{KB}$$

$$p \Rightarrow \neg r$$

$$\neg p \Rightarrow \neg r$$

$$\therefore \neg r \quad Q$$

$$\text{KB} \Leftrightarrow (p \Rightarrow q) \wedge (p \Rightarrow \neg r) \wedge (\neg p \Rightarrow \neg r) \mid Q \Leftrightarrow \neg r$$

Models where KB is true: $M(\text{KB}) = \{M2, M6, M8\}$

Models where Q is true: $M(Q) = \{M2, M4, M6, M8\}$

Model	p	q	r	P1: $p \Rightarrow q$	P2: $q \Rightarrow \neg r$	P3: $\neg p \Rightarrow \neg r$	KB	Q
M1	true	true	true	true	false	true	false	false
M2	true	true	false	true	true	true	true	true
M3	true	false	true	false	true	true	false	false
M4	true	false	false	false	true	true	false	true
M5	false	true	true	true	false	false	false	false
M6	false	true	false	true	true	true	true	true
M7	false	false	true	true	true	false	false	false
M8	false	false	false	true	true	true	true	true

Entailment: Model Checking

$$p \Rightarrow q \quad \text{KB}$$

$$p \Rightarrow \neg r$$

$$\neg p \Rightarrow \neg r$$

$$\therefore \neg r \quad Q$$

$$\text{KB} \Leftrightarrow (p \Rightarrow q) \wedge (p \Rightarrow \neg r) \wedge (\neg p \Rightarrow \neg r) \mid Q \Leftrightarrow \neg r$$

Models where KB is true: $M(\text{KB}) = \{M2, M6, M8\}$

Models where Q is true: $M(Q) = \{M2, M4, M6, M8\}$

$M(\text{KB}) \subseteq M(Q)$ so Q follows KB

Model	p	q	r	P1: $p \Rightarrow q$	P2: $q \Rightarrow \neg r$	P3: $\neg p \Rightarrow \neg r$	KB	Q
M1	true	true	true	true	false	true	false	false
M2	true	true	false	true	true	true	true	true
M3	true	false	true	false	true	true	false	false
M4	true	false	false	false	true	true	false	true
M5	false	true	true	true	false	false	false	false
M6	false	true	false	true	true	true	true	true
M7	false	false	true	true	true	false	false	false
M8	false	false	false	true	true	true	true	true

KB \Rightarrow Q is a **Tautology** Proof

$$p \Rightarrow q$$

$$p \Rightarrow \neg r$$

$$\neg p \Rightarrow \neg r$$

$$\therefore \neg r$$

KB \Rightarrow Q is **true** for ALL models / interpretations

KB \Rightarrow Q is a **tautology**

p	q	r	P1:p \Rightarrow q	P2:q \Rightarrow \neg r	P3: \neg p \Rightarrow \neg r	KB	KB \Rightarrow Q
true	true	true	true	false	true	false	true
true	true	false	true	true	true	true	true
true	false	true	false	true	true	false	true
true	false	false	false	true	true	false	true

false	true	false	true	true	true	true	true
false	false	true	true	true	false	false	true
false	false	false	true	true	true	true	true

Enumeration: Issues

Consider a complex sentence R built with N propositional variables $p_1, p_2, p_3, \dots, p_{N-1}, p_N$ and logical connectives ($\neg, \vee, \wedge, \Rightarrow, \Leftrightarrow$). Each truth assignment is a different possible world.

N Propositional Variables						Complex sentence R
p_1	p_2	p_3	...	p_{N-1}	p_N	
true	true	true	...	true	true	false
true	true	true	...	true	false	true
true	true	false	...	false	true	false
...
false	false	true	...	true	false	true
false	false	true	...	false	true	true
false	false	false	...	false	false	false

2^N Possible Worlds (Models)

2^N Interpretations of R

Can we do better?
Can we automate the process?

Conjunctive Normal Form (CNF)

A sentence is in conjunctive normal form (CNF if and only if consists of **conjunction**:

$$K_1 \wedge K_2 \wedge \dots \wedge K_m$$

of clauses. A clause K_i consists of a **disjunction**

$$(l_{i1} \vee l_{i2} \vee \dots \vee l_{ini})$$

of literals. Finally, a literal is propositional variable (positive literal) or a negated propositional variable (negative literal).

Conjunctive Normal Form (CNF)

Example:

$$(a \vee b \vee \neg c) \wedge (a \vee b \vee \neg c) \wedge (\neg b \vee \neg c)$$

where: a, b, c are literals.
